

# S<sub>2</sub>C

High security document sharing  
and electronic signing

# The safest way to share documents

Cryptoloc S2C is the world's most secure electronic document sharing and signing platform. Share and request signatures without compromising control.

- Share encrypted documents and request electronic signatures by email
- RSA 2048 and AES 256 dual encryption as well as file splitting prevents data from being intercepted or hijacked.
- The most secure way to share documents by email
- Control access to documents – revoke access at any time
- Full audit trails and legally accepted digital signatures
- Ideal for contracts, agreements, witness statements and evidential use
- Included with Cryptoloc Vault as standard
- Available on AWS Marketplace

# More secure than conventional email sharing

Documents sent by email can be intercepted, manipulated and stolen. S2C encrypts your documents and gives you full control over them.

- Documents protected by dual layer encryption and file splitting.
- Unique temporary digital keys generated for each document
- Documents cannot be manipulated at any stage
- Revoke access at any time

# Legally and forensically acceptable digital signatures

Request digital signatures that can stand up and be used for evidential purposes in courts across multiple jurisdictions.

- Easily request signatures from clients
- Digital signatures 100% legally compliant and secure
- Digital authentication provides forensically acceptable signatures
- Faster and more efficient than printed signatures
- Environmentally friendly alternative to paper

# Available on AWS Marketplace

Integrate with your AWS application easily thanks to API available on AWS marketplace. Pay per share.

- Easy API for integration with your AWS application
- Free technical support by email to assist your integration
- Full documentation available online
- Low pay per share + per request pricing plan
- Bespoke pricing for larger users
